Continuation of 5. does NOT place the application in condition for allowance because: The arguments are not persuasive, especially in view of the applicant's narrow interpretation of the claimed invention. The applicant argues, "Hay only suggests that the peripheral devices (not the communication link) may be installed on or within the replaceable component." However, the applicant here is arguing about "communication links" when what is claimed is a "radio frequency interface". The examiner believes the applicant is trying to narrow the definition of radio frequency interface by excluding the sensor's role and only focusing on the communication links. Also, the applicant is arguing only looking in the context of the secondary reference without considering the context of the primary reference. In the primary reference, Walker, it is clear that the sensor is an integral part of the disclosed radio frequency interface (figure 8), even though the sensor is clearly not the link. Walker lacks because it does not disclose the sensor inside the interior space of the ink reservoir, and that is what Hay teaches. If the applicant wishes to argue that the communication link itself must be inside the reservoir, it must be claimed in the claimed invention. For the purposes of the current claimed invention, the examiner considers the sensor an integral part of the claimed radio frequency interface, and thus the previous rejection is found proper.
